

Gram known as 'Chickpea', 'Bengal gram' or 'Chana' is the most important pulse crop of India. India, Pakistan, Ethiopia, Burma, and Turkey are the main gram growing countries. India is the largest producer of Bengal gram in the world, contributing nearly 68.13% of total world production. Production of the gram is extensive in central and southern parts of India such as Madhya Pradesh, Rajasthan, Uttar Pradesh, Haryana, Maharashtra, and Punjab.

Contract Summary

A brief overview of the commodity traded in the Agriota E-Marketplace.

Lot ID	LOT07GR12
HSN Code	07132000
Commodity	Gram
Variety	JG 226
Grade	Grade-I (Band-III)
Aggregation Unit	Metric Tons (MT)
Minimum Lot Size	12.00 MT
Bid Window Termination	48 Hr
Allowable Lot Variance (+)	2.40 MT
Allowable Lot Variance (-)	1.20 MT
Rights per Lot (No.)	3
Current Lot Size	13.00 MT
Contract Price (Per Unit)	₹ 45,550
Fees	2.00%
Taxes	0.00%
Packaging Size (Per Bag)	50 Kg
Contract Value	₹ 6,03,993
Logistic Hub Location	Maheshwari Warehousing, Teh Moman (V) & (P), Barodia Dist Shajapur MP, 465697

Dynamic Crop Calendar (DCC)

It is a real-time tool that tracks and forecasts stresses and their severity by commodity, variety and phenophase. The DCC helps estimate crop health, yield and risk for individual fields at various temporal and geo-spatial levels. DCC also helps in customised monitoring, alert generation and advisory activities.

Yield at Risk (YaR) - Stability

The fluctuation/risk in yield or productivity varies from region to region. The region-wise variation on the yield is depicted in the graph below.

Price Volatility

The monthly fluctuations in price for different benchmark markets are shown below.

Aerial Photo

Aerial photo provides the visual representation of a the field periodically.

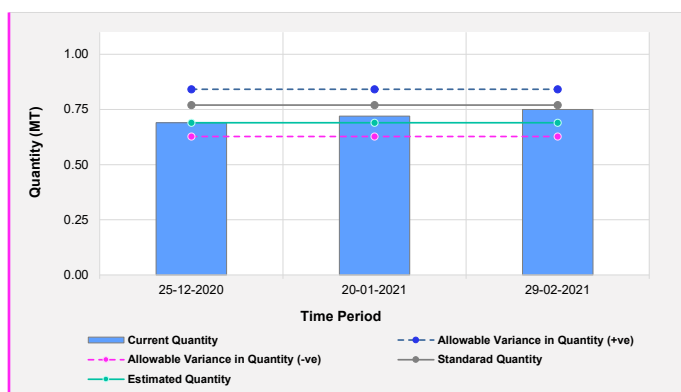

Multispectral Yield Analysis

Tool that provides a Normalised Differential Vegetation Index (NDVI) analysis of individual fields to ground-truth indices. It is standardised across time periods for quick visual interpretation.

Ground-Truth Risk Report

Real-time estimation of yield and its threshold at various stages of crop growth, based on field monitoring of plant health and detection of stress.

Multispectral Analysis

Normalised Differential Vegetation Index (NDVI) comparison of field versus regional indices across commodity, variety and phenophase.
